

How to restore Database from SQL Dumb

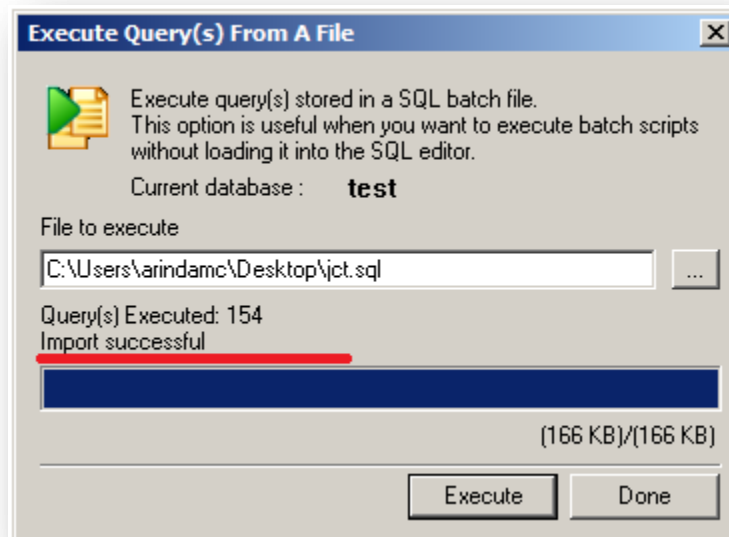

1. Start SQLyog Community Edition  SQLyog .
2. From appeared GUI interface right click on the **root@localhost**, and from the appeared popup menu click on **Restore from SQL Dump**.

3. From the appeared popup box, browse your dumb file(.sql format), or paste the location.

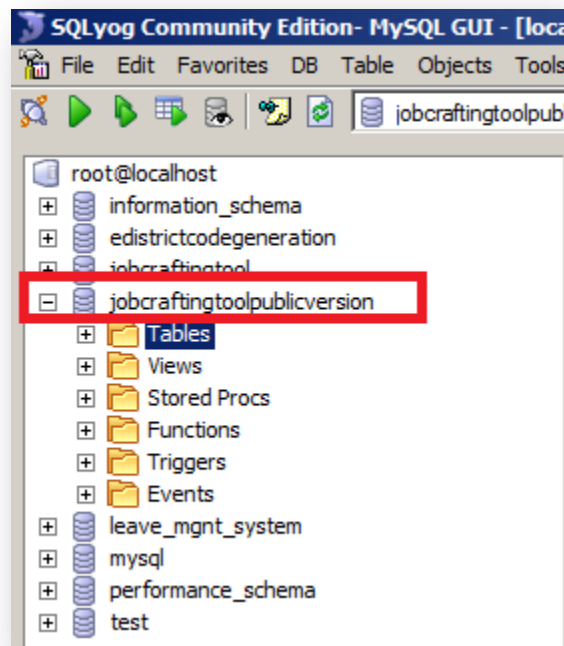

Then press **Execute** button, and wait for the completion of the process. After completion click on the **Done** button.

4. Now if you are unable to see the latest restored database, just right click on your server (which is **root@localhost** here in our example), and click on **Refresh Object Browser** or press **F5** key.

You will see the change as the below example:

5. And you have successfully restored your Database from the .sql dumb file.
